

IVAN DANASUTA

Backend Developer | Laravel Specialist

Jakarta, Indonesia • +6282244034216 • ivandanasuta4@gmail.com
<https://www.linkedin.com/in/ivandanasuta/>

SUMMARY

Backend Engineer with 4+ years of experience building scalable web applications and RESTful APIs using Laravel, PHP, and Node.js. Experienced in database optimization, backend architecture, API integration, and performance tuning. Strong understanding of Eloquent ORM, authentication systems, queue processing, and modern backend development practices. Passionate about building maintainable systems and continuously learning cloud and microservices technologies.

WORK EXPERIENCE

Junior Manager Software Developer, PT Indomarco Prismatama

Jan 2022 - Present

- Developed and maintained scalable backend services and RESTful APIs using Laravel and Node.js for internal operational systems.
- Built and optimized backend services for Indogrosir's Surveyor platform, improving system reliability and operational efficiency.
- Designed and implemented RESTful APIs, reducing data exchange latency by 15% and improving frontend integration performance.
- Implemented JWT authentication and role-based access control.
- Participated in deployment and maintenance processes for backend services and internal applications.
- Developed automated scheduled tasks using Laravel Scheduler for periodic backend processes.
- Optimized database queries and backend processes, improving API response time and system reliability for operational applications.
- Created and maintained API documentation using Postman to improve collaboration across development teams.
- Collaborated with frontend, QA, and business teams in delivering features and resolving production issues.
- Managed backend processes, including performance monitoring and issue resolution.
- Implemented queue jobs and scheduled tasks to automate backend processes.
- Integrated third-party APIs for operational and reporting systems.

Part Time Backend Developer, OMNI IT Consultor

Mar 2024 - Jun 2024

- Designed and developed scalable backend services and APIs using Laravel, PHP, and JavaScript based on client requirements.
- Developed modular and maintainable backend architecture for multiple client projects.
- Analyzed existing backend systems and proposed improvements to enhance scalability, maintainability, and performance.
- Collaborated in Agile development cycles, contributing to feature delivery, bug fixing, and technical improvements.
- Maintained clean and structured code following backend development best practices.

EDUCATION

University of Surabaya - Surabaya, Indonesia

Aug 2017 - May 2021

Bachelor of Information Systems, GPA: 3.43/4.0

ADDITIONAL INFORMATION

- Languages:** English, Indonesia
- Skills:**
 - Backend:**
 - PHP, Laravel, Node.js, Express.js, RESTful API, RabbitMQ, Eloquent ORM
 - Frontend:**
 - Next.js, Tailwind CSS, HTML, CSS, Javascript
 - DevOps & Tools:**
 - Git, Postman, AWS (basic), CI/CD (basic)

IVAN DANASUTA

Backend Developer | Laravel Specialist

Jakarta, Indonesia • +6282244034216 • ivandanasuta4@gmail.com

<https://www.linkedin.com/in/ivandanasuta/>

- **Portfolio:**

- API Surveyor Indogrosir

- Confidential Enterprise Project

- Related Public Platform : <https://register-mm.klikindogrosir.com/>

- Project Overview

- Developed a Laravel-based backend API system for Indogrosir's Surveyor operational platform. The system supports surveyor assignment workflows by processing member registration data, location tracking, and survey task distribution for field operations
 - The backend APIs were integrated with:
 - Android surveyor applications
 - Public member registration websites
 - Internal operational systems

- Responsibilities

- Designed and developed scalable RESTful APIs using Laravel for Android frontend integration.
 - Built backend services for surveyor assignment and location-based task management.
 - Implemented geolocation processing to help surveyors navigate to the nearest assigned survey locations.
 - Developed APIs for handling prospective member registration, survey tracking, and operational workflows.
 - Collaborated with frontend mobile developers to ensure smooth API integration and reliable data exchange.
 - Maintained API documentation and backend system reliability for production operations.

- Tech Stack: Laravel • PHP • MySQL • REST API • Geolocation • JavaScript • Git

- Web Applications

- Event Registration & Attendance Management System

- <https://b2b-wayfinder-mmjkt.vercel.app/>

- <https://welpar-regist-dashboard.vercel.app/>

- Developed an integrated system for event registration and attendance management.
 - Structured and managed database to ensure data consistency and efficient querying.

- Tech Stack: JavaScript, HTML, CSS

- Portfolio Website

- Personal Developer Portfolio

- <https://portfolio-van-v2.vercel.app/>

- Developed and designed a personal portfolio website to showcase software engineering projects, technical skills, and professional experience.
 - Built with modern frontend technologies focusing on responsive design, performance optimization, and user experience.
 - Integrated project showcases, GitHub repositories, and professional information to strengthen personal branding and recruiter visibility
 - Designed to support cross-device accessibility and clean UI presentation.

- Tech Stack: Next.js, Tailwind CSS, Javascript, Vercel

- Github Projects

- AI Document Processor

- <https://github.com/yohanesivan20/ai-doc-processor.git>

- An AI-powered Invoice Processor built with Laravel, Tesseract OCR, and Ollama LLM. Automatically extracts structured data from invoices (images) including vendor, total, and line items.
